**NIH system to monitor emerging drug trends**

*Data from the National Drug Early Warning System will promote rapid and effective public health responses*

An innovative National Drug Early Warning System (NDEWS) is being developed to monitor emerging trends that will help health experts respond quickly to potential outbreaks of illicit drugs such as heroin and to identify increased use of designer synthetic compounds. The system will scan social media and Web platforms to identify new trends as well as use conventional national- and local-level data resources.

The University of Maryland's Center for Substance Abuse Research (CESAR) will receive five years of funding from the National Institute on Drug Abuse (NIDA), part of the National Institutes of Health, to develop NDEWS.

"NDEWS will generate critically needed information about new drug trends in specific locations around the country so rapid, informed, and effective public health responses can be developed precisely where needed," said NIDA Director Dr. Nora D. Volkow. "By monitoring trends at the local level, we hope to prevent emerging drug problems from escalating or spreading to surrounding regions."

Information about designer synthetic drugs – including different ways to possess and use them – is rapidly spread to millions of people through the Internet and social media. Also, other drug trends may quickly change. An example is the recent [increases in heroin use](#) among many regions across the country. Conventional methods to monitor drug trends may not ask about emerging drugs, do not always provide information about the types of drugs used at the community level, and may need a year or more to collect and report information.

Currently, NIDA conducts local-level surveillance on drug use through the [Community Epidemiology Work Group \(CEWG\) network](#). For the last 38 years, CEWG has relied on drug addiction experts to analyze data from various other sources and summarize this information in semiannual reports from sentinel sites - major metropolitan areas and some states from around the United States. NDEWS will continue to monitor drug trends in sentinel sites around the country using many of the national and local data sources that have been utilized by CEWG. To expand upon these efforts and produce an enhanced national system to reflect that new drug trends may emerge outside of sentinel sites, NDEWS will establish a virtual community - a network of addiction experts across the country who will regularly communicate with each other to:

- Detect emerging drug trends using national and local data sources (existing surveys, various drug-related listservs and networks, and social media and web scans).

- Dispatch a rapid response team at hot spots - local areas with reported rapid increases in emerging drugs. This team will assess the outbreak and collect anonymous urine samples – provided by criminal justice drug testing programs – for enhanced analysis that includes testing for synthetic drug metabolites.
- Quickly disseminate information to the public using traditional and social media, websites, publications and newsletters.

“NDEWS promises to provide the country with critically needed real-time information about changing drug use patterns in communities across the country,” said lead investigator Dr. Eric Wish of CESAR. “It will utilize social media and other innovative technologies to identify emerging drugs and trends and to quickly disseminate important findings to experts and interested citizens. This opportunity builds on CESAR’s over 20 years of experience monitoring and reporting on emerging drugs.”

The five-year project begins in August 2014. For more information on the current system, CEWG, please go to: [www.drugabuse.gov/about-nida/organization/workgroups-interest-groups-consortia/community-epidemiology-work-group-cewg](http://www.drugabuse.gov/about-nida/organization/workgroups-interest-groups-consortia/community-epidemiology-work-group-cewg).

Development of NDEWS will be funded under DA038360.

###

The National Institute on Drug Abuse is a component of the National Institutes of Health, U.S. Department of Health and Human Services. NIDA supports most of the world’s research on the health aspects of drug abuse and addiction. The Institute carries out a large variety of programs to inform policy and improve practice. Fact sheets on the health effects of drugs of abuse and information on NIDA research and other activities can be found on the NIDA home page at [www.drugabuse.gov](http://www.drugabuse.gov), which is now compatible with your smartphone, iPad or tablet. To order publications in English or Spanish, call NIDA’s DrugPubs research dissemination center at 1-877-NIDA-NIH or 240-645-0228 (TDD) or fax or email requests to 240-645-0227 or [drugpubs@nida.nih.gov](mailto:drugpubs@nida.nih.gov). Online ordering is available at <http://drugpubs.drugabuse.gov>. NIDA’s media guide can be found at <http://drugabuse.gov/mediaguide/>, and its new easy-to-read website can be found at [www.easyread.drugabuse.gov](http://www.easyread.drugabuse.gov).

**About the National Institutes of Health (NIH):** NIH, the nation’s medical research agency, includes 27 Institutes and Centers and is a component of the U.S. Department of Health and Human Services. NIH is the primary federal agency conducting and supporting basic, clinical, and translational medical research, and is investigating the causes, treatments, and cures for both common and rare diseases. For more information about NIH and its programs, visit [www.nih.gov](http://www.nih.gov).
